

SwiftRoute Logistics Analytics - Complete DAX Reference Manual

Part 1: Easy Assessment - Foundation & Core KPIs

1. Total Shipments

Code snippet
Total Shipments =
COUNT (M1_Shipments[ShipmentID])

2. Total Revenue

Code snippet
Total Revenue =
SUM (M1_Shipments[Revenue])

3. Total Delivery Cost

Code snippet
Total delivery cost =
SUM (M1_Shipments[DeliveryCost])

4. Delivery Margin

Code snippet
Delivery Margin =
[Total Revenue] - [Total delivery cost]

5. On-Time Delivery %

Code snippet
On-Time-Delivery % =
DIVIDE(
 CALCULATE(
 COUNT (M1_Shipments[ShipmentID]),
 M1_Shipments[DeliveryStatus] = "On Time"
),
 [Total Shipments],
 0
)

Part 2: Medium Assessment - Time Intelligence, Delay Analysis & Security

6. Revenue YTD (Year-to-Date)

Code snippet

```
Revenue YTD =  
TOTALYTD(  
    [Total Revenue],  
    'M1_Date'[Date]  
)
```

7. Revenue QTD (Quarter-to-Date)

Code snippet

```
Revenue QTD =  
TOTALQTD(  
    [Total Revenue],  
    'M1_Date'[Date]  
)
```

8. Revenue MTD (Month-to-Date)

Code snippet

```
Revenue MTD =  
TOTALMTD(  
    [Total Revenue],  
    'M1_Date'[Date]  
)
```

9. Delay Hours (Calculated Column)

Location: Table M1_Shipments

Code snippet

```
Delay Hours =  
VAR CalculatedDelay = M1_Shipments[ActualHours] -  
M1_Shipments[PlannedHours]  
RETURN IF(CalculatedDelay < 0, 0, CalculatedDelay)
```

10. Average Delay Hours (Measure)

Code snippet

```
Average Delay Hours =  
AVERAGEX(  
    M1_Shipments,  
    IF(M1_Shipments[ActualHours] - M1_Shipments[PlannedHours] < 0, 0,  
M1_Shipments[ActualHours] - M1_Shipments[PlannedHours])  
)
```

11. Driver Rating (Clean Measure for Visuals)

Code snippet

```
Driver Rating =  
SELECTEDVALUE(M1_Drivers[DriverRating])
```

Part 3: Security Definition (Row-Level Security)

12. Maharashtra View RLS Filter Rule

Role Name: Maharashtra_View

Table Filter: M1_Warehouses

Code snippet

```
[State] = "Maharashtra"
```
